BLITZX ENGINEERING

INFORMATION ASSET INVENTORY

ISO/IEC 27001:2022 | Annex A Controls 5.9, 5.12 and 5.13
GRC Portfolio Project | Version 1.0 | 2 November 2026

DOCUMENT CONTROL

Field	Value	Field	Value
Document ID	BLX-GRC-INV-001	Owner	IT Asset / Information Owners (proposed)
Prepared by	GRC Analyst — Portfolio Project	Version	1.0
Date	2 November 2026	Status	Draft — validation and approval pending
Classification	Internal — portfolio example	Organisation	BLITZX Engineering — fictional case study

Portfolio disclaimer: BLITZX Engineering is a fictional educational case study. This is a proposed portfolio artefact, not an approved company record or evidence of implementation, audit or certification. Owners, classifications and mappings require validation before operational use.

1. Purpose and Scope

This document identifies key information categories, inventories IT systems and supporting infrastructure named in the company profile, and maps categories to systems where supported. Unspecified servers, network devices, databases and endpoints are not invented.

2. Key Categories of Information

No.	Information category	Examples / description	Business purpose
01	Intellectual Property	Product designs, engineering drawings, technical specifications and R&D information.	Supports innovation and product development.
02	Customer Information	Customer contacts, requirements, sales interactions, orders and service history.	Supports sales and after-sales service.
03	Financial Information	Accounting records, budgets, invoices, payments and financial reports.	Supports financial control and decisions.
04	Human Resources Information	Employee records, payroll and workforce administration data.	Supports HR and payroll.
05	Supply Chain Information	Supplier records, procurement, inventory, logistics and distribution data.	Supports sourcing and global distribution.
06	Manufacturing and Production Information	Production schedules, process data, production status and operational records.	Supports manufacturing operations.
07	Sales and Marketing Information	Sales activities, quotations, campaigns, product and market information.	Supports business development.
08	Project Management Information	Project plans, milestones, resource allocation and progress information.	Supports project delivery.
09	IT Service Information	IT requests, incidents, support records and service workflows.	Supports IT service delivery.

No.	Information category	Examples / description	Business purpose
10	Business Intelligence Information	Analytics, dashboards, reports and performance indicators.	Supports management planning.

3. IT Asset Inventory Register

Owners and classifications are proposed. Individual datasets and records may require different classifications.

Asset ID	Asset name	Type	Description / purpose	Proposed owner	Classification	Location
BLX-IT-001	SAP S/4HANA	Software	On-premises ERP integrating finance, supply chain, HR and project management.	IT / relevant process owners	Confidential	Germany primary; USA secondary data centres
BLX-IT-002	Salesforce	Software	Cloud CRM managing customer interactions, sales activities and customer data.	Sales & Marketing	Confidential	Cloud
BLX-IT-003	Siemens Teamcenter	Software	On-premises PLM managing product lifecycle and engineering information.	Engineering	Confidential	Germany primary data centre
BLX-IT-004	Rockwell Automation FactoryTalk	Software	Cloud-hosted MES monitoring and controlling production processes.	Production & Operations	Confidential	Cloud
BLX-IT-005	Microsoft Power BI	Software	Cloud BI and analytics platform for analysis and visualisation of business data.	IT / Management reporting owner	Internal; reports may contain Confidential data	Cloud
BLX-IT-006	ServiceNow	Software	Cloud ITSM platform managing service requests and incident-resolution workflows.	IT Department	Internal; tickets may contain Confidential data	Cloud
BLX-IT-007	Amazon Web Services (AWS)	Cloud infrastructure	Cloud services used to store, process and manage organisational data and workloads.	IT Infrastructure / Cloud owner	Depends on hosted data; baseline Confidential	Cloud; region to confirm
BLX-IT-008	Microsoft Azure	Cloud infrastructure	Cloud services used to store, process and manage organisational data and workloads.	IT Infrastructure / Cloud owner	Depends on hosted data; baseline Confidential	Cloud; region to confirm
BLX-IT-009	Primary Data Centre	Physical IT infrastructure	Primary on-premises data centre hosting business systems, including SAP and Teamcenter.	IT Infrastructure	Hosts information up to Confidential	Germany
BLX-IT-010	Secondary Data Centre	Physical IT infrastructure	Secondary on-premises data centre supporting redundancy and continuity.	IT Infrastructure	Hosts information up to Confidential	United States

4. Mapping of Information Categories to IT Systems

IT system	Information categories managed or supported
SAP S/4HANA	Financial; Human Resources; Supply Chain; Project Management
Salesforce	Customer; Sales and Marketing
Siemens Teamcenter	Intellectual Property; Manufacturing and Production; Project Management
Rockwell Automation FactoryTalk	Manufacturing and Production
Microsoft Power BI	Business Intelligence; Financial; Sales and Marketing; Manufacturing (depending on connected sources)
ServiceNow	IT Service Information
AWS	Categories hosted or processed by deployed workloads; exact mapping requires workload inventory.

IT system	Information categories managed or supported
Microsoft Azure	Categories hosted or processed by deployed workloads; exact mapping requires workload inventory.
Primary Data Centre	Information processed or stored by hosted systems, notably ERP and PLM information.
Secondary Data Centre	Replicated/backed-up information and services, subject to actual recovery configuration.

AWS/Azure mappings depend on actual workloads. Data-centre mappings depend on systems and replication arrangements actually hosted at each site.

5. ISO/IEC 27001:2022 Annex A

Control 5.9 — Inventory of information and other associated assets

The proposed register records named systems with unique IDs, descriptions, proposed owners, classifications and locations. Operational use requires assigned accountability and periodic updates.

Control 5.12 — Classification of information

Classify information according to security needs, considering confidentiality, integrity, availability and interested-party requirements. Proposed labels are illustrative and require an approved scheme.

Control 5.13 — Labelling of information

Establish procedures for applying labels in accordance with the adopted classification scheme. Engineering drawings may be labelled CONFIDENTIAL and general internal reports INTERNAL.

6. Validation and Maintenance Actions

• Confirm deployed systems and ISMS boundary.

• Assign accountable owners and custodians.

• Validate datasets, integrations, hosting locations, cloud regions and data flows.

• Approve classification and labelling schemes.

• Set review frequency and update after material changes.

• Link the inventory to risk, access, supplier, backup and continuity records.

7. Assumptions and Limitations

The case study names six applications, AWS, Azure and two on-premises data centres. SAP is hosted in Germany and the USA; Teamcenter in Germany; Salesforce, FactoryTalk, Power BI and ServiceNow are cloud-based. Exact cloud workloads, regions, individual hardware and backup topology are not specified. Owners and classifications are proposed assumptions.

8. Conclusion

This exercise demonstrates information categorisation, asset inventory, proposed ownership and classification, and information-to-system mapping. It is a draft portfolio artefact pending validation and approval.
